Current version	1.1.7 (version code 22)	Language	English
Base price	Free	Public release	Not announced
Premium	\$4.99 USD list; \$2.99 launch sale where shown	Account	Not required

ONE SENTENCE

BrickOS is a retro Android home launcher that pairs three distinctive interfaces with timed focus sessions and optional Lock Guard.

WHAT IT DOES

BrickOS replaces the usual Android home screen with one of three purpose-built interfaces - Squares, Fruit, or MS. A timed mode called Brick Lock lets the user choose a duration and approve the apps that should remain available. Optional Lock Guard can return the user to BrickOS when an unapproved app comes to the foreground during an active session.

KEY FEATURES

- Timed Brick Lock sessions with user-chosen approved apps
- Direct routes to phone, messages, contacts, camera, gallery, music, maps, calendar, clock, alarms, and calculator
- Three visual skins with shell and accent color choices
- Emergency dialer and a deliberate early-unlock passage
- No account and no studio analytics

MONETIZATION

The free version spends one credit to start a lock or change skins. A user may choose to watch a rewarded ad to earn more credits. BrickOS Premium is a one-time Google Play purchase that removes ads and credit limits. Essential safety access never requires an ad or purchase.

PRIVACY AND LOCK GUARD

BrickOS keeps its chosen skin, settings, credit balance, lock state, and approved-app list in Android private app storage. It has no account and sends no analytics to SgtZaddy Productions.

Optional Lock Guard is an Android Accessibility service. During a user-started lock it receives the package name of the app that came to the foreground. It cannot retrieve window content and does not read screen text, passwords, forms, taps, private messages, contacts, or call logs. Google may process data for rewarded ads and Play purchases as described in the full privacy policy.

AVAILABILITY

BrickOS is currently in closed beta on Android. A public release date has not been announced. The app is not available for iPhone.

STUDIO

SgtZaddy Productions is an independent, creator-led studio building systems-heavy games and experimental interfaces for mobile. Current work includes BrickOS, Black Box Eden, and Everything x Everything.
